

Band-in-a-Box for Mac is compatible with the Intel and Apple Silicon (M1) chips and works on 10.11 to Tahoe 26 inclusive.

macOS 10.11 to Tahoe 26 inclusive.

Intel or ARM-based Apple Silicon processor with 64-bit support.

Minimum 2 GB RAM

Screen Resolution: 1280x800 or higher

At least 2 GB recommended for the main Band-in-a-Box® program. More space is required for RealTracks, depending on which package you buy...

RealTracks & RealDrums: ~100-400 MB per set

Pro RealCombos: ~45 GB

MegaPAK RealCombos: ~55 GB

Full UltraPAK/UltraPAK+ when installed to internal hard drive: ~205 GB

(another ~205 GB is required for the installation files when downloading the UltraPAK or UltraPAK+)

Hard Drive versions of the UltraPAK or UltraPAK+ do not require any hard disk space when run directly from the external hard drive they are shipped on.

USB port for the USB Flash Drive version of the Pro or MegaPAK

USB port for the USB Hard Drive version of the UltraPAK, UltraPAK+, or Audiophile Edition

Band-in-a-Box will not work on a drive formatted with a case sensitive file system. This is not very common. You can check this by selecting the hard drive on your desktop or in Finder, and going to the File menu | Get Info (Command+I is the keyboard shortcut). Apple's Disk Utility gives you the option to format with case sensitivity. What this means is that file.txt, File.txt, and FILE.TXT are all unique filenames. Band-in-a-Box does not support this, and needs to be used on a case insensitive formatted drive.

Internet connection recommended for program activation and updates. **Audiophile Edition** är förbättrad med FLAC-filer, som är 60 % mindre än AIFF-filer samtidigt som de bibehåller identisk ljudkvalitet, och levereras nu på en snabb 1 TB SSD.
